

MINUTES

Trustee Admin Meeting

10:00 am July 11, 2025

At SSID maintenance building

Present: Chair Bryan Miles, Trustee Brent Brucker, Administrator Janine Reimer

[Meeting was informal. Discussion proceeded without agenda or prior minutes.]

GARP update

Discussion was about the 2 options given by the Drinking Water Officer in regard to Groundwater at Risk of Pathogens: SSID could either install a chlorination injection system or be on a permanent Water Quality Advisory involving signage.

The trustees expressed concern that being on a permanent Water Quality Advisory would set up SSID drinking water as the suspect in any reported illness, and that the District would have to respond to these reports with emergency chlorination and warning notices every time.

The trustees also considered that the required permanent signage, warning of potential waterborne illness, would imply that SSID was not effectively protecting its water quality.

The requirement to chlorinate was discussed as a future inevitability as other untreated water areas in the province have been required to do so.

The trustees also discussed that the community might be receptive to the concept of chlorinating, as one can get used to chlorine in drinking water. They agreed that the choice of chlorination or warning signage should be reviewed with property owners at the AGM.
